

No source came back inverted

Median token-Jaccard of the preserving class minus the changing class. One rubric, 380 pairs, source-blinded; $\kappa = 0.6842$.

IETF errata · reader-reported corrections

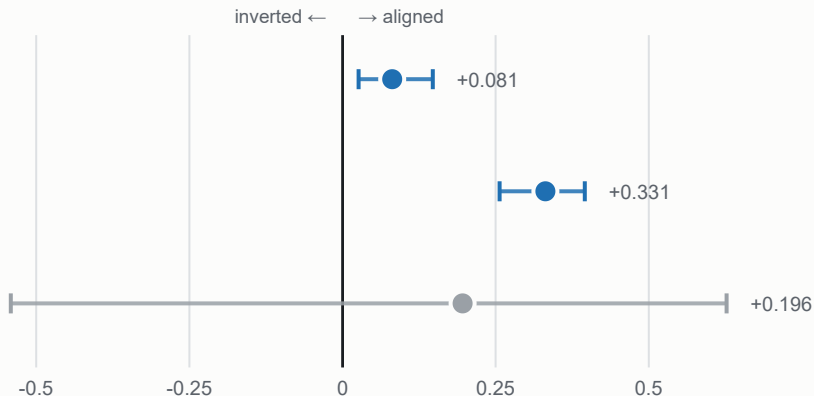

n = 132 agreed judgeable · aligned

IETF bis · working-group revisions

n = 131 agreed judgeable · aligned

authored factorial instrument [SGAR]

n = 62 agreed judgeable · indistinguishable

On the common support both arms share (token-Jaccard ≥ 0.4 , the floor bis alignment imposes and errata never did), errata moves to +0.0525 [0.0015, 0.1133] and bis to +0.3265 [0.252, 0.389] — still disjoint. Two revision processes inside one standards body differ several-fold in coupling magnitude. The authored interval spans both directions and supports no claim about orientation at all.
